Shared Resource Updates

The pipeline enables researchers to gain access to their sequencing data in a timely manner. It has processed more than one trillion bases of data since 2010. BISR is expanding the pipeline to accommodate other types of sequencers including SOLiD. BISR also provides data management and database development services to investigators. Recently, BISR partnered with Nationwide Children's Hospital on a grant from the Department of Defense to develop a data portal managing phenotype data for military work dogs.
